Plano Concrete Contractors Celebrates 20th Anniversary Providing Concrete Services in North Texas

Plano, Texas – January 1, 2026 – Plano Concrete Contractors, a local business owned by David Rodriguez, announces its 20th anniversary in the field of concrete design and construction in North Texas. The company handles projects that include pouring new concrete as well as resurfacing and repairing existing surfaces. It serves both residential and commercial clients across Plano and surrounding communities, with attention to local environmental factors such as soil conditions, drainage needs, and the region's variable weather patterns, including considerations for material ratios, temperature, and moisture during installation.

The business addresses a variety of residential needs, including the installation and repair of driveways, patios, sidewalks, foundations, slabs, and retaining walls. For outdoor spaces, it incorporates considerations for proper grading and drainage to manage water flow effectively. Additional residential work involves decorative options like stamped or stained finishes, along with general repairs to address issues such as cracks or uneven surfaces, and the application of seal coatings for added protection.

Commercial projects managed by the company encompass parking lots, loading docks, warehouse floors, and related structures. These efforts include site preparation, reinforcement, and the use of materials suited to heavy traffic and load requirements. The team also handles concrete demolition and removal when replacing old surfaces, followed by cleanup and disposal of debris, as well as line striping for parking areas.

Plano Concrete Contractors follows a consistent process for its projects, starting with an initial consultation and on-site inspection to evaluate conditions and discuss objectives. This leads to a detailed proposal that outlines the scope, materials, timeline, and costs. During execution, the focus remains on structured installation steps and regular updates, with post-project support that includes maintenance recommendations for longevity.

The company operates in multiple areas, including Plano, Allen, Carrollton, Richardson, Frisco, McKinney, Addison, Irving, Garland, and Dallas. Through its work, it contributes to the development and maintenance of functional concrete elements in local residential properties and commercial facilities, drawing on regional experience to deliver practical solutions tailored to North Texas conditions.

About Plano Concrete Contractors:
Plano Concrete Contractors is a concrete service provider operating in Plano, Texas. The company has developed experience in serving homeowners and businesses with a range of residential and commercial concrete projects. With over 20 years in the industry, the team brings extensive knowledge to each project, addressing local challenges like varying soil conditions and extreme weather patterns.
